Data Sync Integration Process Document & Templates

Introduction

This document details the data fields to be shared between the Client and MoveInSync, and other details such as frequency of sharing, etc. It also provides detail on the data format and restrictions, if any, on certain data fields. The document lists use cases and gives examples of data records under these cases.

Employee data

This data set contains data of all employees who avail travel services. This data is maintained at an office level, i.e. one file per URL.

Employee File has the following fields [field headers must be maintained as below]:

EmployeeId,Email,EmployeeName,ProjectTeam,Gender,Address,GeoCode,PhoneNumber,AlternatePhoneNumber,Nodal,ShuttlePoint,Locality,SubscribeEmail,SubscribeMobileApp,SubscribeSMS,CostCenter,EmployeeCostCenterActivationDate,BusinessUnit,BusinessUnitActivationDate,EmployeeBillingZone,OfficeName,RemoveEmployee,RMID

Data fields and description

Headers/ Field	Description*	Type (length)	Addition	Update	Termination
Employee Id	Employee unique Id. This is mandatory information to have in the MoveInSync system.	String (1-20)	Mandatory (Client-will share the emp ID same as in the HRMS tool)	Mandatory (Client-will share the emp ID same as in the HRMS tool)	Mandatory (Client-will share the emp ID same as in the HRMS tool)
Email	Employee email address to which emails will get triggered. Should be unique for all the employees. Since this is mandatory	String 5-60	Mandatory (Client-will share the email ID same as the	Optional (Client-will share the email ID same as the HRMS	Optional (Client-will share the email ID same as the

	information to have in the MoveInSync system.		HRMS tool)	tool)	HRMS tool)
ProjectTeam	Name of the project or team to which employee belongs. If the team mentioned here is not present in the MoveInSync system, it will be auto-created.	String 1-50	Mandatory (Client-will share the process name from the HRMS tool)	Optional (Client-will share the process name from the HRMS tool)	Optional (Client-will send Blank)
Employee Name	Name of the employee.	String 1-100	Mandatory (Client-will share the emp name same as the HRMS tool)	Optional (Client-will share the emp name same as the HRMS tool)	Optional (Client-will share the emp name same as the HRMS tool)
Gender	Gender of the employee. M: for male F: for female		Mandatory (Client-will share M for Male and F for female)	Optional (Client-will share M for Male and F for female)	Optional (Client-will share M for Male and F for female)
GeoCode	Home location geo code as x,y It must be given in form of a pair of coordinates. If only one coordinate is given, an error will be thrown. Please ensure that this is enclosed in double quotations to enable csv to treat this as a single field. If geocords are not there we will consider the office geocords.	String 7-30	Optional MoveInSync will update the office geocode while uploading the file.)	Optional (MoveInSync need to add profile office geocode of the respective employees while uploading the file.)	Optional (Blank)
Address	Home address. Home address or any other field value which might contain a comma (,) to be put in	String 1-500	Optional (Client-will share the Address	Optional (Client-will share the Address same	Optional (Blank)

	double quotes (" ")		same as the HRMS tool)	as the HRMS tool)	
PhoneNu mber	Mobile number of the employee. All sms communication will be here. Country code is assumed to be 91. Only Indian mobile numbers are accepted.	String 0-30	Optional (blank)	Optional (blank)	Optional (blank)
Alternate PhoneNu mber	Alternate mobile number of the employee. Country code is assumed to be 91. Only Indian mobile numbers are accepted.	String 0-30	Optional (blank)	Optional (blank)	Optional (blank)
Nodal	Nodal point assigned to the employee. This must exist in the MoveInSync system else error will be thrown. <i>For Client this field can be kept as blank as Address related data set(Geocode/Nodal/Zone/Land Mark) will be assigned separately by the Transport team.</i>	String	Optional (blank)	Optional (blank)	Optional (blank)
ShuttlePoi nt	Shuttle point assigned to the employee. This must exist in the MoveInSync system else error will be thrown. <i>For Client this field can be kept as blank as Address related data set(Geocode/Nodal/Zone/Land Mark) will be assigned separately by the Transport team.</i>	String	Optional (blank)	Optional (blank)	Optional (blank)
Locality	Landmark for easy communication to router/driver.	String 1-100	Optional (blank)	Optional (blank)	Optional (blank)

	e.g. Rajiv chowk. <i>For Client this field can be kept as blank as Address related data set(Geocode/Nodal/Zone/Land Mark) will be assigned separately by the Transport team.</i>				
Subscribe Email	Keep it true if an employee wants to receive emails.	1 (true) / 0 (false)	Mandatory (Client-will share as 1)	Optional (Client-will share as 1)	Optional (Client-will share as 1)
Subscribe MobileApp	Keep it true if an employee wants to use the MoveInSync mobile app.	1 (true) / 0 (false)	Mandatory (Client-will share as 1)	Optional (Client-will share as 1)	Optional (Client-will share as 1)
Subscribe SMS	Keep it true if an employee wants to receive sms.	1 (true) / 0 (false)	Mandatory (Client-will share as 1)	Optional (Client-will share as 1)	Optional (Client-will share as 1)
CostCenter	Cost center associated with the employee. If this does not exist in the MoveInSync system no error will be thrown, instead the cost center will be automatically created.	String (1-50)	Optional (Blank)	Optional (Blank)	Optional (Blank)
Employee CostCenterActivationDate	Date from which the above mentioned cost center is activated for the employee. This cannot be a future date. Must be either current date or past date up to deactivation date of the last cost-center	Date dd-MM-yyyy Or dd/mm/yyyy	Optional (Blank)	Optional (Blank)	Optional (Blank)

	assigned to employee.				
Business Unit	Business unit associated with the employee. If this does not exist in the MoveInSync system no error will be thrown, instead the business unit will be automatically created.	String (1-50)	Optional (Blank)	Optional (Blank)	Optional (Blank)
Business UnitActivationDate	Date from which the above mentioned business unit is activated for the employee. This cannot be a future date. Must be either current date or past date up to deactivation date of the last business unit assigned to employee.	Date dd/mm/yyyy Or dd-MM-yyyy	Optional (Blank)	Optional (Blank)	Optional (Blank)
EmployeeBillingZone	If trip is billed using zone-based contract, provide the zone associated with employee. This must exist in the MoveInSync system else error will be thrown. <i>For Client, this field can be kept as blank as Address related data set(Geocode/Nodal/Zone/Land Mark) will be assigned separately by the Transport team.</i>	String	Optional (Blank)	Optional (Blank)	Optional (Blank)
OfficeName	Name of the office location to which employee is associated.	String (1-20)	Optional (Client-will	Optional (Client-will	Optional (Client-will

	The office name that is sent must exist in MoveInSync.		share the building names as per the HRMS tool) (MoveInSync need to change the existing office names according to building names of Client-HRMS tool)	share the building names as per the HRMS tool) (MoveInSync need to change the existing office names according to building names of Client-HRMS tool)	share the building names as per the HRMS tool) (MoveInSync need to change the existing office names according to building names of Client-HRMS tool)
RemoveEmployee	Active/ Inactive (Whether employee is active in system or we want to deactivate this employee)	Constant String value: Active / Inactive	Mandatory (Client-will share as Active)	Mandatory (Client-will share as Active)	Mandatory (Client-will share as Inactive)
RMID	Employee ID of the reporting manager.	Numeric (1-20)	Optional (Blank)	Optional (Blank)	Optional (Blank)

* The values in any field can be in caps

* Home address or any other field value which might contain a comma (,) to be put in double quotes (" ")

Frequency

Once every (configurable). the customer will send the file to the SFTP server. MoveInSync will automatically pick this file and process the data. This file will contain only delta information, i.e. additions, deletions, change in employee information. If there are errors in the data, that data will not be processed. All errors will be communicated through an email notification.

Delta File: Only the fields which got changed need to be pushed along with Employeeid and RemoveEmployee column

(example - if Phone Number is changed then EmployeeId, Phone Number, RemoveEmployee should have values rest all other columns should be left blank)

Client will share the file on a daily basis.

Error communication

If any errors are encountered, these will be logged. An email notification will be sent to a preconfigured list of email IDs. This email will have the error dump attached in the following format:

S.No	Row Number	Field name	Error Description
1	2	Address	Address exceeds then the maximum length
2	41	Office	F89 does not exist in ETS.

Fixing of errors and re-sending file to MoveInSync

Upon receiving the list of errors, user will have to manually address erroneous records and send the file back to MoveInSync. The file can be sent in the following ways:

1. Uploading on the SFTP server. MoveInSync will automatically pick the file from there.
2. Manually uploading through the data upload interface.

Use cases

Employee joins organization

All mandatory data to be sent for this employee. Optional data can be sent in the same record or later if required.

Client will share EmployeeID,Email,EmployeeName,ProjectTeam,Gender,Address,SubscribeEmail,SubscribeMobileApp,SubscribeSMS,OfficeName,RemoveEmployee fields.

Employee leaves organization

Only the following fields will be populated in the csv

- Employee ID
- Remove Employee: Inactive

Client will share the data in

EmployeeID,Email,EmployeeName,Gender,SubscribeEmail,SubscribeMobileApp,SubscribeSMS,OfficeName,RemoveEmployee fields.

Employee changes home address

Since the geocodes are not coming through this file, the geocode changes, Address related data set(Address/Nodal/Zone/LandMark) has to be handled manually by the Transport Team.

For a address change Client will share only the address field with the file, MoveInSync needs to add the office geocode of the respective offices of the employees in the geocode column of the file before uploading as only address column changes for a update file may lead to a change of addresses in the past trips.Client Transport team will change the geocodes manually as per the address.

MoveInSync uses the SFTP process for the Employee Data Sync. The file will be uploaded to a predefined directory. MoveInSync will periodically poll the directory (frequency is configurable) for any new data files uploaded by the customer. Frequency of File Transfer to be decided along with the client.

Details required from Client

1. SSH Public key
2. IP address/range of the client network from where access is needed.

Details to be provided by MoveInSync

1. MoveInSync needs to provide the DNS name of the data sync server so that client can whitelist it.
2. Username to connect with MoveInSync Server.
3. Employee Sync Folder details (This will be a single folder for Client, MoveInSync will separate the file for each URL based on the office names before uploading the file where the Client would transfer the employee details file in MoveInSync system folder)
4. Port details to connect to MoveInSync system
5. Template for Sending data in Employee Sync File

Steps for Integration:

A: Discussion on Data Templates for Integration

1. File parameters in the Employee Sync File to be discussed between MoveInSync and Client
2. Data Headers which need to be pushed need to be finalised.
3. In case Address related fields (Nodal, Shuttle Points, Geocode, Zone) are not stored in the HR Database, it is suggested to maintain them locally in MoveInSync and not push them via Sync. (Client will only send the address text/ for addition by default office geocode will be updated and for update MoveInSync will update the office geocode of the employees before uploading)
4. Data will have to be shared in the Template accepted by MoveInSync environment only (Change in Template is not feasible at our end)
5. Data needs to be shared with Office Name as created in MoveInSync Server (Client will share the building names as per the HR database, MoveInSync to change the existing office names based on the HR Database)
6. For every URL environment existing within MoveInSync, the file will have to be sent in a Separate Folder provided by MoveInSync. (This will be a single folder for

Client, MoveInSync will separate the file for each URL based on the office names before uploading the file where the Client would transfer the employee details file in MoveInSync system folder)

7. Files for various locations within a server URL can be sent in a common folder only
8. MoveInSync to share the max permissible character limits for each Data Header.

B: Discussion on establishing Network connectivity and File Transfer

1. Creation of a UAT Server by MoveInSync
2. Setting up of Data Sync configurations in UAT environment By MoveInSync
3. Client to whitelist the DNS Name provided by MoveInSync
4. Client to perform the Network connectivity Test.
5. Client to prepare the file along with the finalized data points in columns as per the format shared by MoveInSync.
6. On receiving the go ahead for file transfer, Client to push a file for testing on MoveInSync UAT environment
7. In case of failures in connectivity, the issues to be discussed
8. In case of success in connectivity on UAT, scenarios for creation, deactivation and updating of employee details to be tested.
9. Post Successful testing, process for phased movement to production server has to be planned.
