Objective

To streamline the process for requesting SSO technical integration support from TechOps ensuring proper validation and efficient communication between teams.

Scope

This procedure applies to all requests for SSO technical integrations SAML & API based including client and prospect-related queries.

Process Outline

"Requestors should send an initial email to support@moveinsync.com with appropriate priority levels. This will help the support team allocate the SUP ticket to the respective PODs for further action."

1. Request Validation

- **Module PODs:** All technical integration requests should originate from the respective module PODs (Emp-exp) after explaining the basic functionality and requirement gathering from the client.
 - IDP Metadata File
 - Downtime
 - Username Type: Email ID or Employee ID?
 - SSO Verification: test users configured in the application.
 - Link to the document: [MoveinSync SSO Process -Ext](#)
 - **KAM/TAM Approval:** The request must be reviewed and validated by the Key Account Manager (KAM) or Technical Account Manager (TAM) before proceeding.
-

2. Request Submission

- **Initiating Integration**
 - Once validated, the module POD (Emp-exp) will raise a TechOps (TO) ticket to initiate the integration process.
 - The request, along with any relevant documentation or details, should be sent to: integrations@moveinsync.com
 - **The TO ticket should contain the following information:**
 1. Site URL
 2. Type of site: Production / POC / UAT
 3. Integration method: SAML / API-based
 4. IDP metadata file from the client
 5. Downtime required (15-20 minutes)
 6. Username Type
 7. Availability of test profiles on the site
 8. Requestor's name
-

3. Role of TechOps

- **Technical Support Scope**

- TechOps will provide integration support only after the request has been validated by the respective POD.
 - Documentation related to SSO integration has been previously shared with the respective PODs with handover process. If necessary, it can be provided again.
-

Prospects (Sales)

- **Sales Team Coordination:**

The Sales team should involve the pre-solutioning team during initial prospect calls.

- **Post-Call Actions:**

After initial calls, the pre-solutioning team will contact the appropriate module POD to initiate the integration process.

- **Escalation:**

In case of technical challenges during the integration, the POD team may escalate the issue to TechOps for additional support or participation.

Points to Note

1. For clients opting for the SAML SSO process, a TO ticket must be raised to enable the feature. TechOps will share the required information accordingly.
 2. For any communication or clarification regarding integrations, emails should be sent to:
 - **integrations@moveinsync.com**
 - **techops@moveinsync.com**
 3. For different site types ("Production SG / POC / UAT / Production Mumbai"), distinct SP metadata files are available and should be shared as per the site's URL.
-

Communication Protocol

- All requests and communications regarding technical integrations should be formally documented via TO tickets.
 - Communication should be made through the designated email addresses: integrations@moveinsync.com, ensuring clear documentation.
 - Any changes or updates to the integration process must be shared with all relevant stakeholders by DevOps/TechOps.
-

SLA's for SSO Integration:

Minor / Major / Critical TO's - inform us prior to 4 working days of the activity.

P0 (Blocker) - inform us before 1 working day with the approval of KDV/charan and Dibyendu.
